

Creating a Dashboard in Tableau: By Yog Chaudhary

Write-up Description:

Data Cleaning Steps:

The dataset was already cleaned, so no specific data cleaning actions were necessary.

Selection of Charts:

- **Top 10 Team Standing:** Employed a bar chart to depict the top 10 teams based on points, facilitating quick performance comparisons.
- **Ferrari Driver Performance:** Utilized a bar graph to represent driver performance metrics for Ferrari, offering a visual comparison of key factors.
- **Worldwide Wins:** Opted for a table format to display wins by country, providing a clear and succinct overview of victories across different regions.
- **Team Win Score Over Time:** Utilized a line graph to showcase team win scores over time, enabling trend analysis and performance tracking.

Business Insights:

Performance Benchmarking: Teams can gauge their performance against the top 10 teams, identifying areas for potential enhancement.

Driver Performance Analysis: Insights from the bar graph depicting Ferrari driver performance inform decisions related to driver selection and development strategies.

Geographical Success Analysis: Reviewing the table of worldwide wins reveals regions with opportunities for talent recruitment and global expansion strategies.
